SureClinical eTMF Pricing FAQ

Q: How many studies can we conduct with each package?

A: Each package is priced for a single study. You can add new studies easily on your own with the click of a button at any time. You will only be invoiced for active studies – concluded studies are not counted toward this total.
Q: How many users/investigators can I have for a study?

A: When you start a study it's often difficult to estimate how many users you will have, making it difficult to budget. We don't limit the number of users for a study.
Q: How many sites can I have for a study?

A: Each of the Basic, Enhanced and Premier and Enterprise packages includes Standard site licensing, which provides up to four sites per study. With the Unlimited site licensing option, we don't limit the number of sites for a study.
Q: Do I need to buy high-trust digital certificates?

A: SureClincal provides Adobe high-trust digital signature certificates that are validated on trust lists for up to 15 years. Other free certificates on the market are only valid for a year, and then expire, which isn't consistent with the retention period of clinical documents. We believe this higher trust level is what discriminating clinical practitioners both desire and need to comply with varying regulations across geographies.
Q: Are there overages or hidden fees?

A: In most cases SureClinical provides plenty of space for you to run your studies without any additional fees. However, if you approach or exceed space or bandwidth limits, we may proactively reach out to you to increase your resource utilization package.

A: Unlike other cloud vendors, we make it very simple to export your documents and metadata from your eTMF at any time. However, if you maintain your subscription, you can start a new study and can continue to access completed studies in perpetuity. Our goal is that you see the value in maintaining SureClinical's service for all of your regulatory document needs. This is our commitment to you.
Q: Do I pay for a year upfront?

A: Yes. SureClinical works with our customers to be successful, including working with your auditors to ensure that we meet the most rigorous Part 11 and EU requirements. Given the commitment to writing standard operating procedures and investment in training, we don't believe that shorter terms ensure the highest probability of success for your study. In turn, we ask our customers to commit to a year upfront.
Q: What are the SureClinical training requirements?

A: SureClinical believes that training your staff is critical to your success using our regulatory content platform, and user training is also required by the FDA under 21 CFR Part 11 for compliance. Given the size and complexity of your engagement, we tailor different training packages to fit your needs. All trainees receive a certificate of training completion. We also provide additional services from advance configuration, process reengineering, form development, program management, to name a few.
