Platform Upgrade Admin Guide

As part of our biweekly maintenance deployment, on Saturday 28 May 2022 we will be providing all Sure customers and licensed users with a free platform upgrade to our new **Peak Productivity Platform**. The Peak Productivity Platform adds the ability for users to access MS365 Office docs for FDA Part 11 digital signing, review and approval for workflows and other team real-time collaboration features. With the new connector to MS365, Sure Users can access MS Word docs directly from within Sure Apps, saving the hassle of downloading and uploading. If you wish to know more about the new features of this platform, click here.

Sharing Sure Outside of Your Organization

The Peak Platform Upgrade deployment will also include our new licensing technology that provides administrators with the ability to add new licenses in seconds through our in-app purchasing feature.

Sure Apps and Platform are licensed under our Master Subscription Agreement to a single licensed organization with a specified email domain. While we've always had a license agreement in place, we previously prioritized user experience over license enforcement. With this new release we've added new features that will enhance security and ensure that we can continue to provide you with the user experience, features and outstanding services that you expect from the Sure Team, while adhering to the terms and conditions of our pre-existing mutual license agreement.

Licensing With This Release

With this release we will be granting all existing users a license to continue using our applications with the following conditions:

- **Licensed organizations**: All users of your licensed organization, such as your employees and contingent staff with your email domain, can continue accessing Sure Apps and Platform with no change and no action required.

- **Unlicensed organizations**: If you have shared your license with users in a separate organization, further steps may be required to secure a license for these users (referred to in license manager as 'Third Party Users.') It's fast and easy to add licenses with our in-app license manager. Details are outlined below.
  - Temporary User Licenses: To facilitate a smooth transition for any users from unlicensed organizations, we are granting temporary user licenses until 30 June 2022. You'll have time to add these users or delete them before the temporary license expiration date. Details below explain how to modify license assignments for any user.

What Do I Need To Do?

If you are a Sure Admin, and you have not shared licenses with users outside of your organization, then no action is required. However, if you have shared licenses with users outside of your licensed organization, further steps may be required to secure a license for these users.

Accessing the Pre-Production Release

Customers who have access to a preview instance can review and access Sure's License Manager to see a list of all licenses, licensed user details, and subscription summary info . If you don't have a preview instance, you'll follow the same steps below when our production instance goes live, estimated 1 June 2022.

Acknowledge our End User Subscription Agreement

Upon availability of the Platform Upgrade Release, all users will be asked to acknowledge and agree to Sure's End User Subscription terms with a click-to-agree button with their first login. We've updated our End User Subscription Agreement (EUSA) to reaffirm our terms and conditions. You can view our EUSA online by clicking here.

Accessing Sure's License Manager and License Audit Views

You and your administrators are responsible for managing all Sure Users. Our license manager provides You with an overview of all licensed users as well as any unlicensed users from other organizations.

Administrators can access our new **License Manager View** from the administration tab. License Manager provides a central view to view all licenses and to add, delete users from licenses.

License Audit View provides admins with a single view of licensed and unlicensed users on your system. If you aren't sure whether you have unlicensed users, you'll need to access this view prior to 30 June 2022.

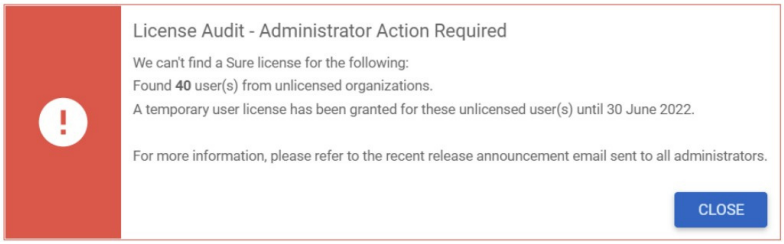

License Audit View allows admins to perform simple in-app licensing operations:

- Select one or more users and take individual or bulk actions:
  - Add license(s) to one or more selected Users.
  - Remove licenses from one or more existing users
  - Delete unlicensed users
  - Add a Person as a new User and issue a new license

Administrator Action Required Dialog Box

If the system detects unlicensed users, administrators will be prompted at login with a dialog box that warns of unlicensed users:

To resolve this dialog, Administrators will need to take action in the system to either license or delete these users in the License Audit View below. If no action is taken to license or delete the unlicensed users, they will be automatically deactivated by the system after 30 June 2022.

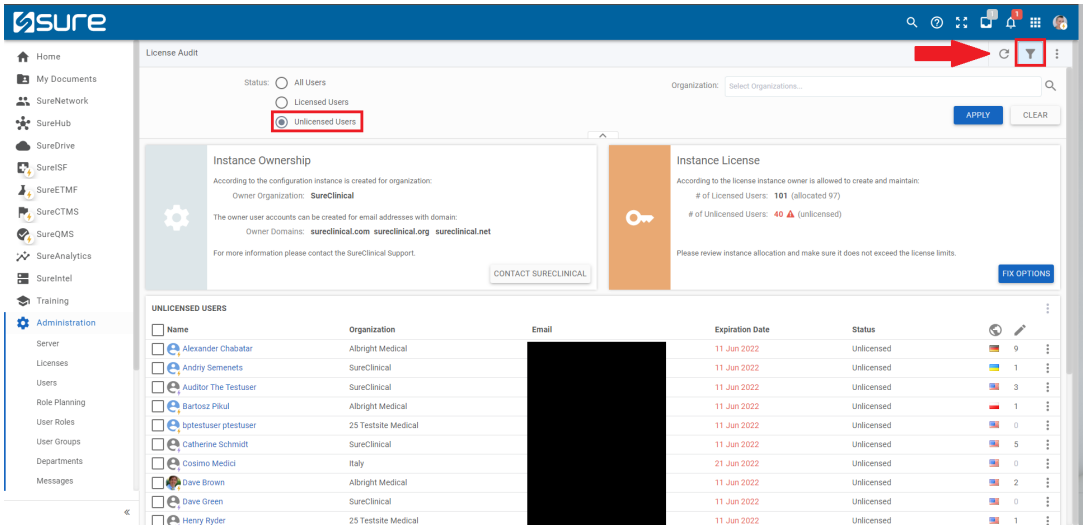

License Audit View

If you have received a dialog message about unlicensed users, you'll resolve the issue within the **License Audit View**. The steps and screenshots below give examples of how to resolve unlicensed users:

Filter View by User License

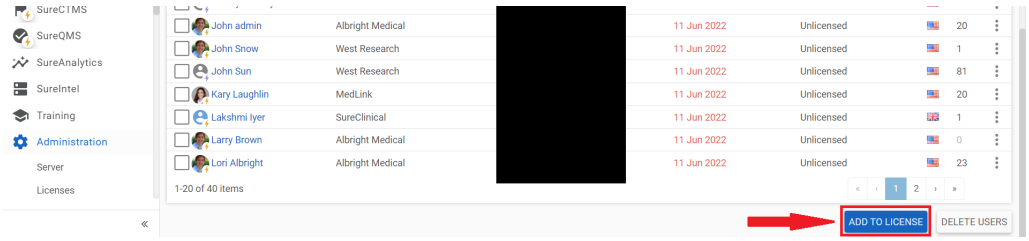

Navigate to the License Audit View by selecting 'License Audit' from the above dialog box. Use the filter icon in the top right hand corner of the screen to filter users by 'Licensed Users' and 'Unlicensed Users'. .

You may conduct single or bulk actions from this page. To select users for bulk action, select the check box on the left of their user name

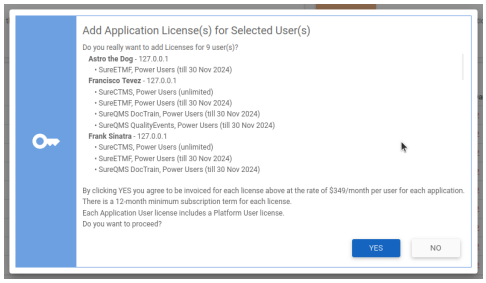

Adding Licenses to Unlicensed Users

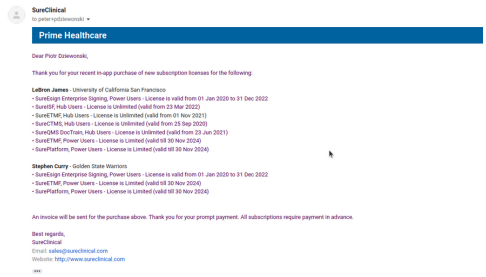

To add a License to an Unlicensed user from this view, select the check box on the left of the user name, scroll to the bottom of the page and select 'Add to License'.

You will then be presented with a dialog box:

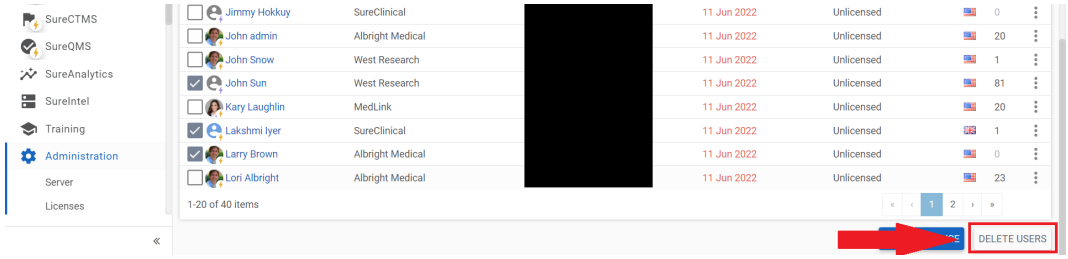

By clicking YES in the dialog box, you agree to be invoiced for each application license added, at the rate of $349/month per user per application. There is a 12 month minimum subscription term for each license. Each App user license includes a Platform User license.

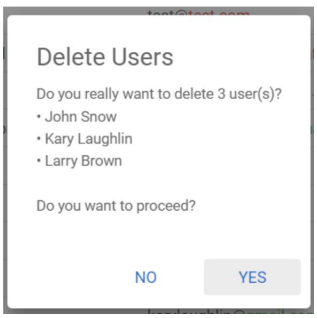

You will also be notified by email of any license changes.

Deleting Unlicensed Users

To delete a user from this screen, select the check box next to the name of the user(s) you want to delete, then select 'Delete Users'.

You will then be presented with a dialog box:

Select 'Yes' to delete the user(s). When a user is deleted, they will be unable to access any documents stored in the system. Before deleting a user, please download any data or documents that you need. SureClinical will not retain documents or data from deleted users.
