SureClinical Platform Upgrade and Licensing FAQs

Q1: How can we share our study information with external organizations?

A1: Our applications have been licensed to a single organization. Until our Spring 2022 Platform Update, we haven't offered a license that allows your organization to share a user account with external organizations. With this update, existing customers may purchase full use ('Power User') licenses for users with external organizations who need full access to your application instance. Without a full use Power User license, there are several ways to share study data with persons from external organizations:

- Reports via email
- Report Subscriptions
- Team Hubs (subject to platform and user license entitlements)

Team Hubs: Most customers currently have the ability to provide role-based access to persons at external organizations with their Platform license. We offer flexible eClinical application team hubs for use by roles such as Sponsor, CRO, Site, Supplier, Partner and others. Each Team Hub App User requires user licensing. To learn more about how you can provide availability to external persons through Team Hubs, please contact Sales@Sureclinical.net.

Q2: Where can I see the user account information for my organization used in the audit?

A2: We emailed each customer a list of all licensed and unlicensed User Accounts created, along with the user's name, organization name, email address and the user account creation date, activation status (active/inactive), and if active, total months active on our platform. We also capture IP addresses in our audit log, but for security purposes we are not releasing IP addresses with the list of user accounts for your instance. You will not be charged for user accounts marked inactive as of 1 June 2022. After 1 June 2022, we've provided a 30-day grace period for your review of all users, and to take an action of adding or deactivating User Accounts. User Account information is also available in-app under the admin audit trail area.

Q3: Why were we able to add users last year without being required to pay first?

A3: Like many enterprise software companies, our Master Subscription Agreement specifies the terms and conditions of our agreement. When your organization agrees to our terms and conditions, they agree to be responsible for all of their User's compliance with our MSA, Subscription Order Forms, Subscription charge metrics, End User Subscription Agreement, and other related documentation. By agreeing to and approving our terms and conditions of use, your organization has agreed not only to comply with our licensing terms, but also agreed to provide payment for use of our services by your organization and its Users. (ctn)

All SureClinical applications accessed on our Platform by any User require a named user license for each individual User. Each application user requires a Platform Named User license which is non-shareable. All of our initial subscription order forms include a platform fee for each named user with a customer specified number of Platform Named Users. We've included a copy of your initial subscription order form in our most recent email for records. If you need a copy of your order form, please contact sales.

Prior to our recent platform update, if a customer needed to purchase more user licenses, we relied on the customer to contact our sales team to place an order. With the release of our Spring 2022 Platform Update, we've implemented a new self-service in-application ordering and licensing function that allows administrators to review all license use by user, use by project, by license overuse, by license order transactions, license reporting, and more. Additionally, with our new eClinical app order fulfillment, licensing and provisioning service, administrators can purchase application and user licenses with immediate deployment capabilities. The update provides real-time license management and provisioning.

Q4: We would like to learn more about your self-serve in application license management and ordering capabilities. Where can we learn more about these tools and the processes that we may use in the future for license management, ordering and license provisioning?

A4: In the future we'll be sharing information and training on how to use the new self-serve in-app license management and provisioning features. For now, please contact us directly at sales@sureclinical.net

Q5: We're concerned that some of our team members - including system admins - could use the new in-app purchasing capability to add application or user licenses without realizing the financial impact of these actions. What assurances does SureClinical offer to protect our organization from unexpected charges for in-app purchases?

A5: With our new in-app purchase shopping cart and self-serve ordering functionality, your administrators will have a 7-day order review period, during which time they can update, adjust or cancel any Cart order before it is finalized. Additionally, if an unauthorized purchase was made for your account, please report it immediately and our team will resolve it with a credit and/or other action.
